

Honda Racing Team Chooses Amber Composites as Official Prepreg Supplier

Langley Mill, UK. (May 2, 2011) - Amber Composites materials have been chosen for extensive use in Honda Racing's British Touring Car, and the companies have signed a long-term technical supply agreement. Team Dynamics, who prepare the Honda for racing, are using Amber's prepreg technology to reduce weight in critical areas of the car. Advances have already been made in key areas such as the front bumper, the splitter, and the floor structure which sits below the engine bay and extends underneath the driver.

"Our partnership with Amber Composites represents the beginning of a long-term plan to use composite technology in a wide range of parts. Amber's involvement as our sole supplier of composite materials brings a number of important advantages to the programme including technical support and advice, speed and volume of supply, and most importantly the quality of the product. We look forward to working closely with Amber both now and in the future as we implement a number of important developments on the car."

- Peter Crolla, Team Manager - Team Dynamics Motorsport Ltd

Amber Composites is a leading manufacturer of composite materials for high-performance, lightweight structures. Amber provides materials and technical expertise to a diverse set of industries, including motorsport, automotive, aerospace, communications, marine and wind energy. Amber Composites is ISO 9001 and ISO 14001 certified.
